

## **Chief Aerospace Medicine and Advanced Flight Surgeon (SGP) Symposium**

The Chief of Aerospace Medicine (SGP) is key to the integration of a Team Aerospace both within the medical group, and to the entire wing and higher headquarters. In a manner analogous to the Chief, Professional Services (SGH), and Chief, Nursing Services (SGN), the SGP assures the quality of key elements of the aerospace medicine program, directs their integration for maximum mission accomplishment and brings particular knowledge of the "human weapon system."

The SGP serves as the authority, consultant, and subject matter expert in the medical specialty of aerospace medicine and will be a member of the medical treatment facility Executive Committee. This position will be held by the most qualified flight surgeon. The SGP role is an essential element of the command and control to Team Aerospace.

The Chief Aerospace Medicine and Advanced Flight Surgeon (SGP) Symposium is held twice a year to offer an arena for knowledge and experience exchange among SGPs.

"The planners/speakers/faculty do not have any relevant financial relationships to disclose. There is no Commercial support provided for this activity."
